

Alien Night At St. Kevins Primary School, Gold Coast Australia

The St. Kevins Primary School Astronomical Club recently held an **Alien Night** get together to promote the activities of Astronomy in the school curriculum. Noel Welstead was invited to attend and give a talk on the activities of our Seti group here in Brisbane. The night commenced with a talk from Noel and a very enthusiastic question & answer session immediately after. The night culminated in an Alien Parade that showed that there are indeed many differing types of Aliens around and a viewing session on the schools sports oval that allowed the visitors a chance to see many objects in the night sky that they had never seen before. The whole event was a total success. The pictures below are the winning Aliens who won the prize and the Alien parade. Thank you St Kevins, for the opportunity to talk to your members and friends.
